

Tank War Installation Manual

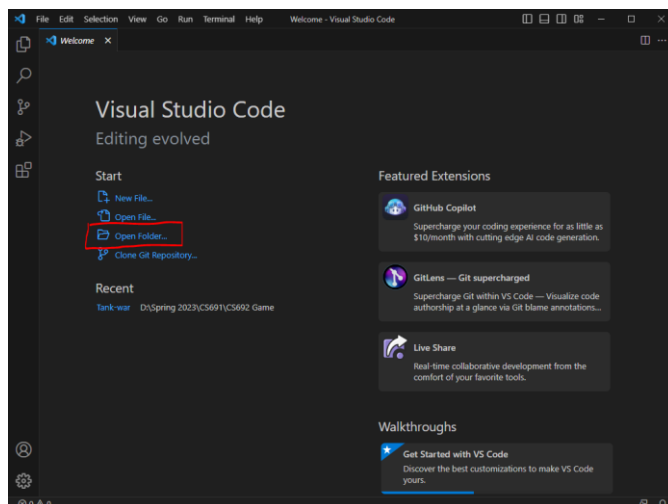

1. Prerequisites: Python, Visual Studio Code, Pyqt5 tool

- ✧ Download Python: <https://www.python.org/downloads/> (At least version 3.8) & follow the instructions to install: <https://www.tutorialspoint.com/how-to-install-python-in-windows>
- ✧ Download VSCode: <https://code.visualstudio.com/download>
- ✧ Install Pyqt5: <https://pythonbasics.org/install-pyqt/>

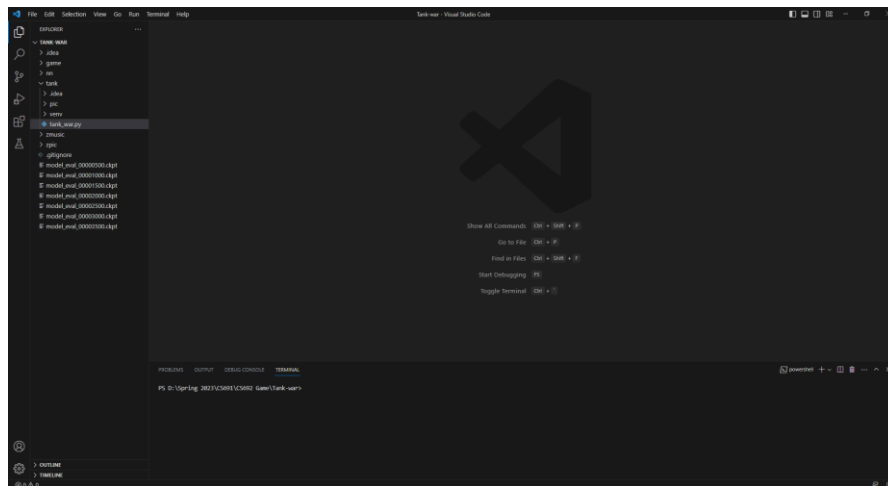

2. Go to <https://github.com/htmwn/2023S-zhu>, download this package & unzip it:

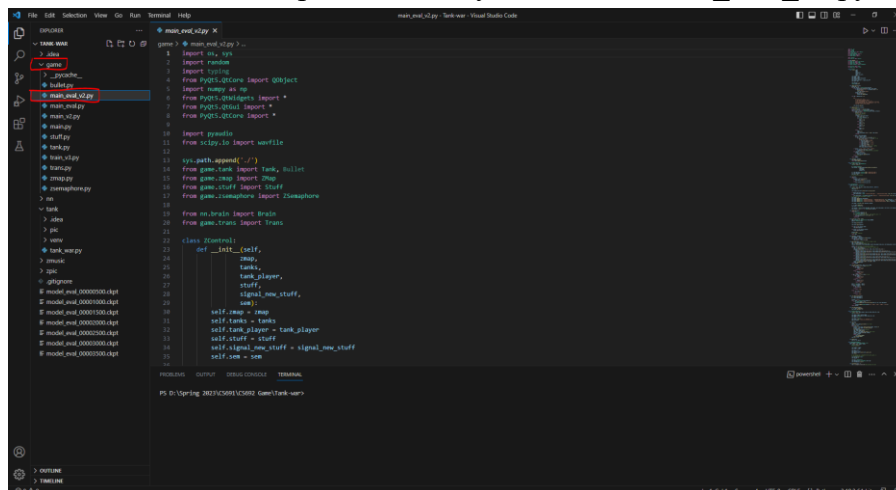

3. Open VSCode then open folder you just unzip, the folder should also called “Tank-war”.

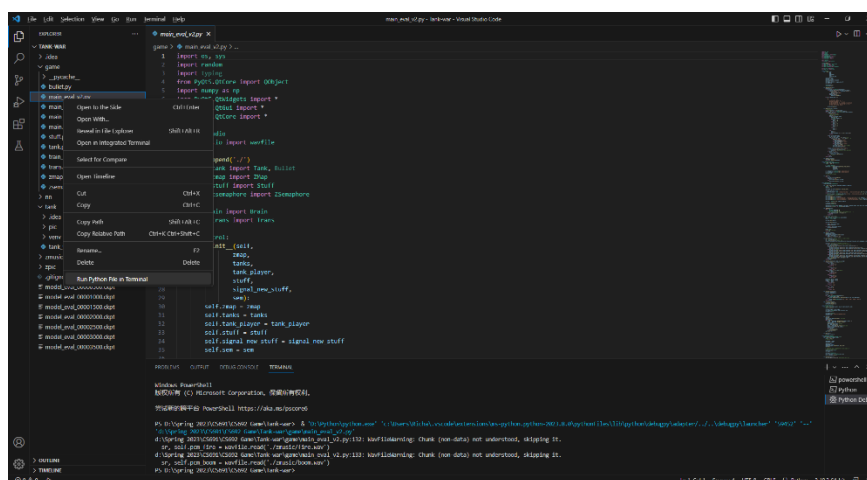

4. Then you should see the following screen:

5. Go to the left side of the screen, locate the “game” branch under the TANK-WAR branch, and click to expand it. Then you will find `main_eval_v2.py`.

6. Right click `main_eval_v2.py` file then choose the option “Run Python File in Terminal.”

Now you can start the game.
